

The tables and charts shown are based on linking data from Key Stage 4 (2014/15 and 2015/16) to Key Stage 1 (2005/06 and 2006/07). Charts show the grade distribution and % attaining grade C or higher in GCSE English for each KS1 score. The first chart shows data for pupils who have English as their First Language (Not EAL) and the second for pupils who have English as an Additional Language (EAL). Data is then shown for a range of aggregations (shown in the grouping header) from all pupils (the first table) to data grouped by EAL, Gender, Term of Birth and FSM Group (the last table). Groupings are based on data derived from school census linked to Key Stage 1 so the pupil characteristics used represent those at age 7.

Birth Term is Autumn (September to December), Spring (January to April) or Summer (May to August). FSM groups are based on looking at each pupil's FSM status over 3 years (Reception, Y1, Y2) and this is used to generate 3 groupings: 0_Never (Never FSM), 1_Low (FSM on fewer than 70% of occasions), 2_High (FSM on 70% or more occasions). For the KS1 years used in this dataset school census collections were annually rather than termly so, in reality, FSM group 1 will be pupils FSM on one or two occasions out of 3 and group 2 will be pupils FSM on all 3 census collections.

The KS1 score (KS1RW) is calculated by assigning values of 0,1,2,3,4,5 to each national curriculum level (W, 1, 2C, 2B, 2A, 3) for reading and writing and then adding these to give an overall score from 0 to 10. The very small number of pupils with level 4 are assigned a score of 5.

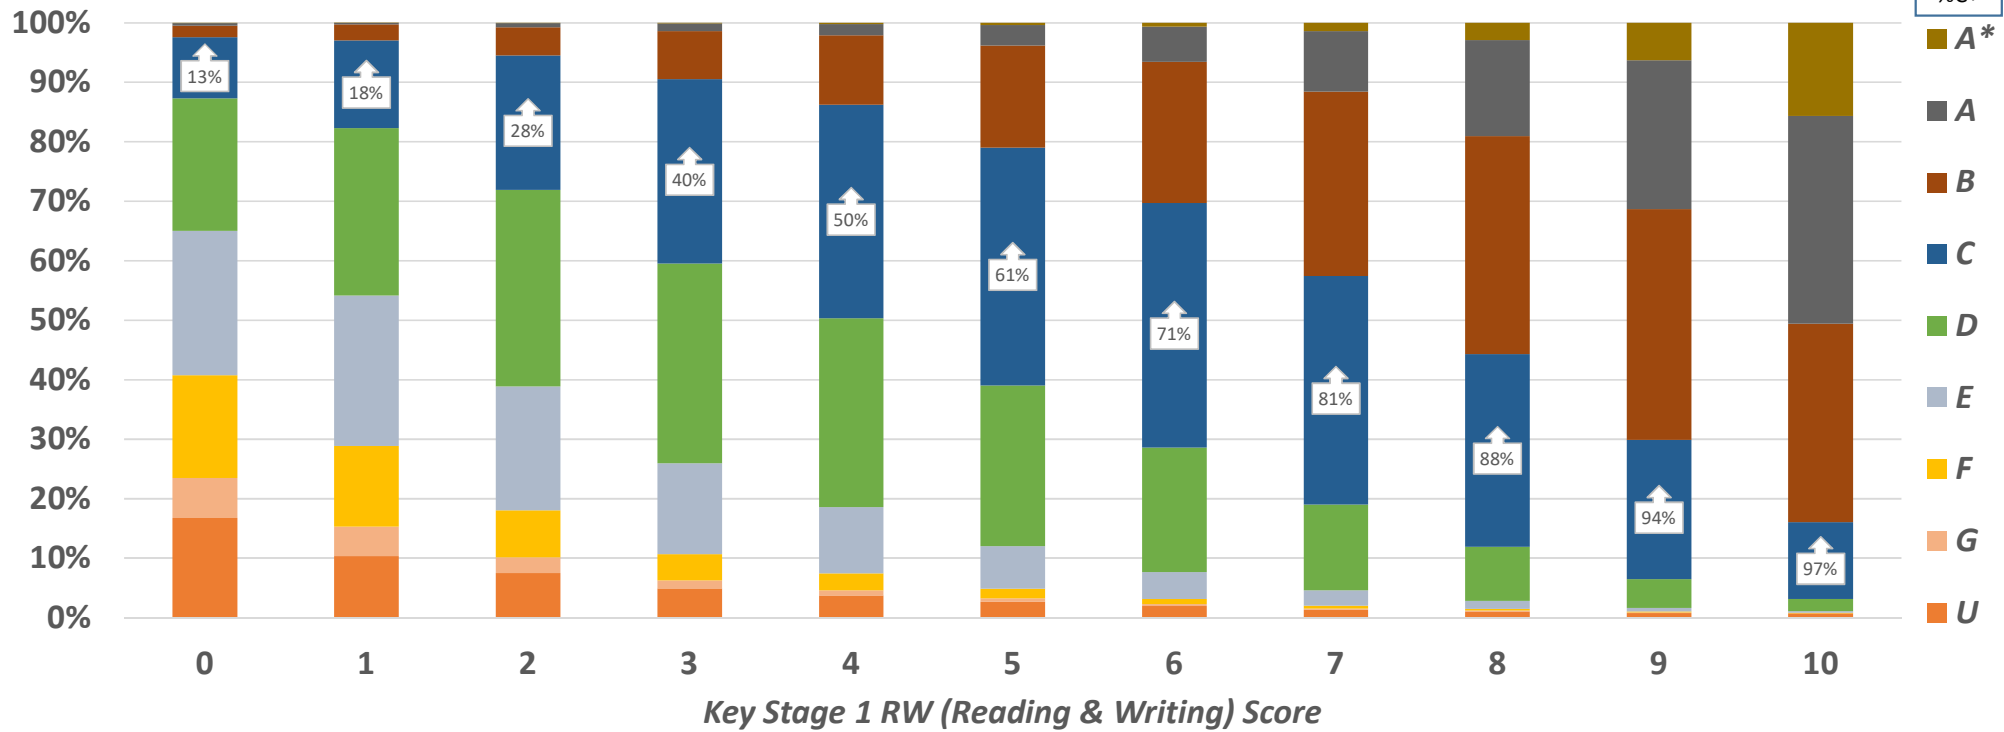

The tables show, for each grouping and each KS1RW score, the % of pupils who attained grade C or higher in English at Key Stage 4. The number of pupils in each group is also shown. Where fewer than 50% of pupils attain C+ the cell is highlighted.

Finally, a calculation is performed to show the percentage of pupils in what we call 'high risk' category. By 'high risk' we simply mean cases where fewer than 50% of pupils attain C+ i.e. the highlighted cells. The calculation shows the % of the cohort in the highlighted cells. In the first table (All Pupils) there are a total of 172,852 pupils with KS1RW scores of 0,1,2 or 3. There are 977,353 pupils in the overall dataset so the proportion in the 'high risk' category is 18% (172,852 divided by 977,353).

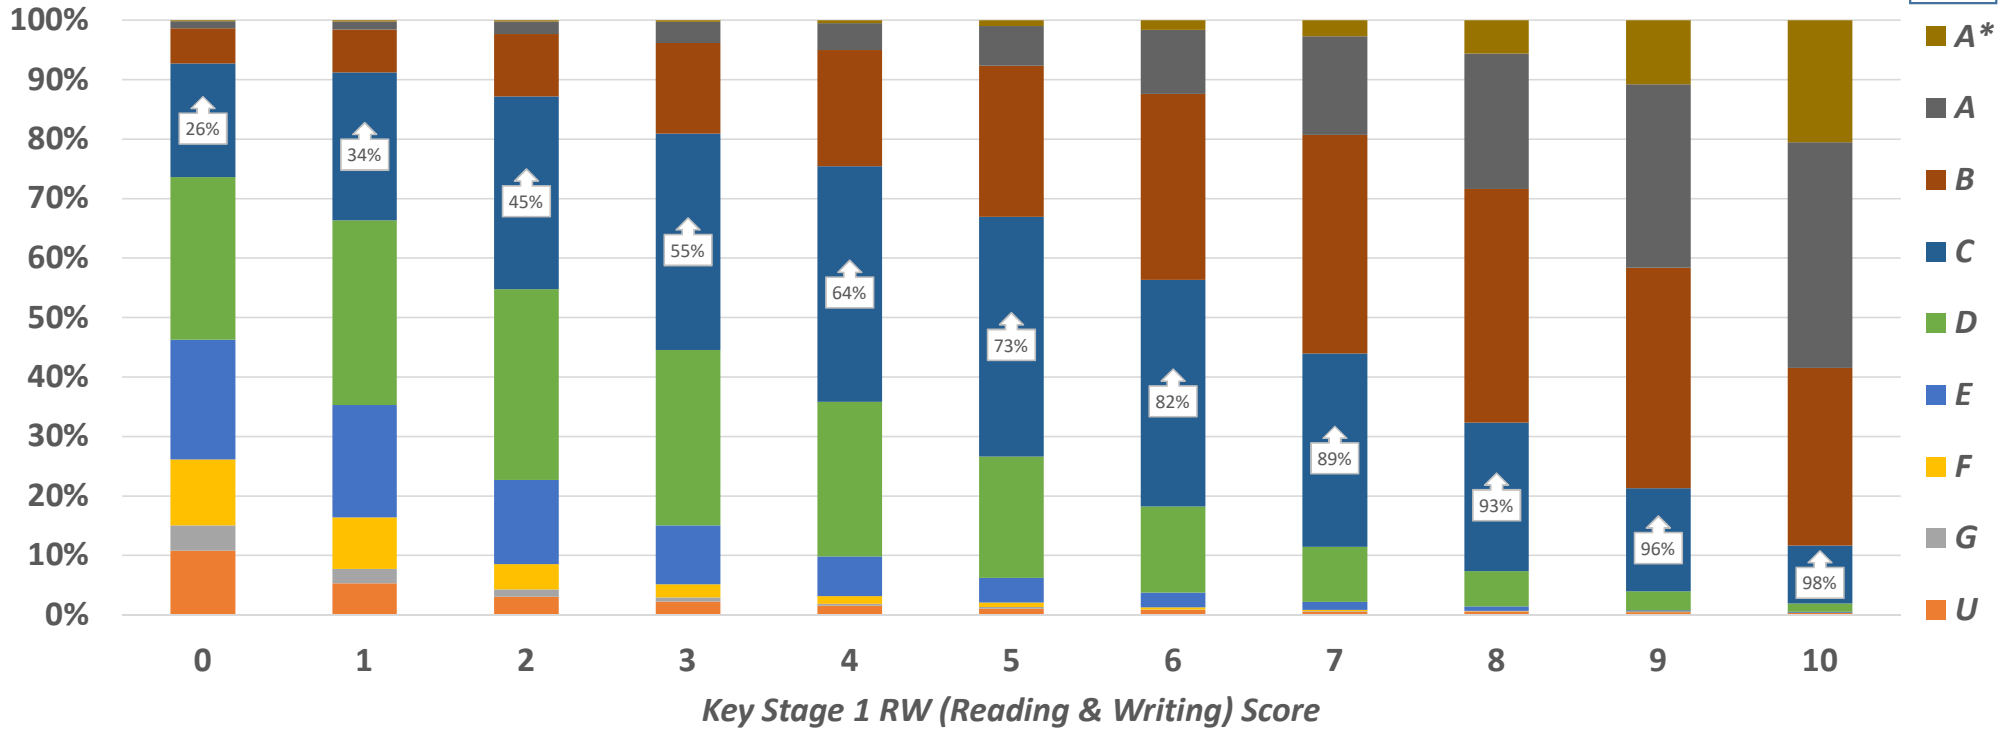

Please note that 'high risk' does NOT mean that pupils with these characteristics and attainment will not attain C+ at Key Stage 4 - it simply indicates that it is less likely than for other pupils. Even for the lowest attaining group - W (Working towards Level 1) for both reading and writing at KS1 - we find that 17% attain C+ at Key Stage 4. Groupings where more than 50% of the grouping are in the 'high risk' category are also highlighted.

Analysis using this data can be found on the Education Datalab Website (<https://educationdatalab.org.uk/>).
